Applicant(s)

BAUM, ROBERT T.

Examiner

Michael Pyzocha

Art Unit

2137

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 20 July 2001.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-36 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-36 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 20 July 2001 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Art Unit: 2137

DETAILED ACTION

1. Claims 1-36 are pending.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-4, 6, 14-16, 24-26, 28-30, 33-36 are rejected under 35 U.S.C. 103(a) as being unpatentable over Wallace (U.S. 5,988,497), further in view of "Data Link Layer" (hereinafter DLL).

As per claims 1, 24-26, 28-30, 33, Wallace discloses examining at least a part of the unique bit string; comparing the at least a part of the unique bit string examined with stored information; and authenticating the party only if the at least a part of the unique bit string examined matches the stored information (see column 1 line 63 through column 2 line 29 where it is inherent the unique bit string is maintained as the packet is communicated within the network).

Art Unit: 2137

Wallace fails to disclose the bit string replacing part of the layer 2 (data link layer) information.

However, DLL teaches the data link layer (see DLL page 1).

At the time of the invention it would have been obvious to a person of ordinary skill in the art to use Wallace's authentication method in the data link layer of DLL.

Motivation to do so would have been to allow for error detection (see DLL page 1).

As per claims 2, 34 the modified Wallace and DLL system discloses approving a transaction if the party was authenticated (see Wallace column 2 lines 16-29).

As per claim 3, the modified Wallace and DLL system disclose the at least a part of the unique bit string examined depends on a type of the transaction (see Wallace column 2 lines 5-15).

As per claims 4, 6, the modified Wallace and DLL system disclose the stored information compared with the at least a part of the unique bit string examined depends on a type of the transaction (see Wallace column 2 lines 5-15).

As per claims 14-15, the modified Wallace and DLL system discloses the unique bit string is provisioned and controlled by a network service provider (see Wallace column 2 lines 5-29).

Art Unit: 2137

As per claim 16, the modified Wallace and DLL system discloses the act of authentication does not require the transmission of any authentication information from the party (see Wallace column 2 lines 5-29).

As per claims 35-36 the modified Wallace and DLL system discloses an output for forwarding an authentication and authorization response to the transaction facility (see Wallace column 1 lines 52-62).

4. Claim 5, 7-13, 17-23, 27, 31-32 are rejected under 35 U.S.C. 103(a) as being unpatentable over the modified Wallace and DLL system as applied to claims 1, 24, 28 above, and further in view of Mori et al (U.S. 5,880,446).

As per claim 5, the modified Wallace and DLL system fails to disclose the type of transaction is selected from a group of transaction types consisting of: transactions greater than a predetermined amount; transactions less than a predetermined amount; purchases delivered to a credit card billing device; and purchases delivered to an address other than a credit card billing address.

However, Mori et al teaches such transaction types (see column 14 lines 19-40).

At the time of the invention it would have been obvious to a person of ordinary skill in the art to use Mori et al's

Art Unit: 2137

transaction data in the modified Wallace and DLL authentication system.

Motivation to do so would have been to include information about a buy and a seller (see Mori et al column 14 lines 19-40).

As per claims 7-13 the modified Wallace, DLL and Mori et al system discloses the at least a part of the unique bit string examined identifies a location at which packets from the party to the transaction entered the network; a group to which an individual, who is a party to the transaction, belongs; a customer that is a party to the transaction; a customer identification; an individual user identification; a network ingress location (see Mori et al column 14 lines 19-40).

As per claim 17, the modified Wallace, DLL and Mori et al system discloses tracking a network ingress location at which a packet associated with a transaction originated, wherein packets entering the network have at least a part of a layer 2 information replaced with a unique bit string, the method comprising: examining at least a part of the unique bit string; and determining the network ingress location from the at least a part of the unique bit string (see Wallace and DLL as applied to claim 1 where the transaction data now contains the location data of Mori et al column 14 lines 19-40).

Art Unit: 2137

As per claims 18-21 the modified Wallace, DLL and Mori et al system discloses the at least a part of the unique bit string examined identifies an individual who is a party to the transaction; a group to which an individual, who is a party to the transaction, belongs; a customer that is a party to the transaction; a customer identification; an individual user identification; a network ingress location (see Mori et al column 14 lines 19-40).

As per claims 22-23, the modified Wallace, DLL and Mori et al system discloses the unique bit string is provisioned and controlled by a network service provider (see Wallace column 2 lines 5-29).

As per claims 27, 31 the modified Wallace, DLL, and Mori et al system discloses the unique bit string identifies a logical port at which the packet entered the network (see Mori et al column 14 lines 19-40).

As per claim 32, the modified Wallace, DLL, and Mori et al system discloses no information in addition to the unique bit string is needed for authentication the party to the transaction (see Wallace column 2 lines 5-29).

Art Unit: 2137

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Michael Pyzocha whose telephone number is (571) 272-3875. The examiner can normally be reached on 7:00am - 4:30pm first Fridays of the bi-week off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Andrew Caldwell can be reached on (571) 272-3868. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
